

Statement of Work: Multi-Speciality Hospital Management SaaS Platform

A comprehensive, cloud-based solution designed to transform hospital operations through digital excellence, operational efficiency, and enhanced patient care delivery.

Executive Overview

This Statement of Work outlines the design, development, testing, deployment, and ongoing maintenance of a state-of-the-art Hospital Management SaaS Platform tailored for multi-speciality hospitals. The platform will streamline operations across all departments, enhance patient experiences, and provide data-driven insights for strategic decision-making.

Our solution addresses the complex operational challenges faced by modern healthcare institutions, enabling seamless coordination between clinical and administrative functions whilst ensuring regulatory compliance and data security.

📋 **Project Type:** SaaS Product Development

Industry: Healthcare Technology

Delivery Model: Subscription-Based

Deployment: Cloud-Native

Scope of Work: Core Platform Modules

The platform encompasses eight integrated modules that work together to deliver comprehensive hospital management capabilities, from patient registration through discharge and billing.

Hospital Administration

Centralised dashboard for managing departments, staff roles, and overall hospital performance metrics with real-time visibility.

Patient Management System

Complete patient lifecycle management including registration, appointments, medical history, and discharge documentation.

Doctor Portal

Comprehensive tools for schedule management, digital prescriptions, appointment tracking, and patient record access.

Financial & Operational Modules

Billing & Accounts Module

Comprehensive financial management covering OPD/IPD billing, payment tracking, insurance claim processing, and automated revenue reconciliation. Integration with leading payment gateways including Razorpay, Paytm, and Stripe ensures seamless transactions.

Pharmacy Management System

End-to-end inventory control with stock management, automated purchase orders, sales tracking, and intelligent expiry alerts. Real-time synchronisation with billing system for accurate revenue tracking.

Laboratory Information Management (LIMS)

Streamlined laboratory operations including test registration, sample tracking, report generation, and secure online result access for patients and referring physicians.

Digital Health & Intelligence

Telemedicine Module

Enable remote healthcare delivery through secure video consultations, digital prescription generation, and continuous remote patient monitoring. This module extends your hospital's reach beyond physical boundaries.

- HD video consultation platform
- Digital prescription management
- Remote vital signs monitoring
- Appointment scheduling integration

Analytics & Reporting

Transform data into actionable insights with real-time reporting, revenue analytics, and comprehensive dashboards that empower data-driven decision-making across all levels of hospital management.

- Real-time operational metrics
- Revenue and financial insights
- Patient flow analytics
- Custom report generation

Functional Requirements

The platform will deliver robust functionality designed to meet the diverse needs of multi-speciality hospital operations whilst maintaining security, scalability, and user experience excellence.

Multi-Role Access Control

Sophisticated role-based access for Admin, Doctor, Patient, Pharmacist, and Lab Technician with granular permission management.

Enterprise Security

Secure authentication with Two-Factor Authentication (2FA), role-based access control, and comprehensive audit logging for compliance.

Real-Time Appointment System

Automated appointment booking with intelligent scheduling, instant notifications via SMS/Email, and conflict resolution.

Cloud Infrastructure

Scalable cloud-based data storage ensuring high availability, disaster recovery, and seamless performance under peak loads.

Financial Operations

Online billing, automated receipt generation, payment gateway integration, and comprehensive audit trails for financial transparency.

Third-Party Integrations

Seamless integration with payment processors, email services, SMS APIs, and other essential third-party platforms.

Technical Architecture

Our technology stack has been carefully selected to ensure scalability, security, performance, and maintainability. Each component represents industry best practices for enterprise SaaS platforms.

Frontend (Web)

React.js or Angular for responsive, intuitive admin and doctor portals

Mobile Applications

Flutter for cross-platform iOS and Android patient and doctor apps

Backend Services

Node.js (Express) or Django REST framework for robust API development

Database

PostgreSQL or MySQL for reliable, scalable data management

Cloud Hosting

AWS, Azure, or Google Cloud Platform for enterprise-grade infrastructure

Authentication

JWT tokens with role-based access control for secure user management

Development & Operations Stack

Communication & Notifications

Firebase Cloud Messaging, MSG91, and SendGrid for reliable, multi-channel communication with patients and staff.

Version Control

GitHub or GitLab for collaborative development, code review, and version management with complete audit trails.

Project Management

Jira or Trello for agile project tracking, sprint planning, and transparent progress reporting to stakeholders.

Continuous Integration

Automated CI/CD pipelines ensuring rapid, reliable deployments with minimal downtime and comprehensive testing.

Project Delivery Timeline

Our phased approach ensures systematic delivery of functionality, allowing for continuous feedback and refinement throughout the development lifecycle. Total estimated duration is **10 weeks** from project kickoff to production deployment.

Phase 1 Deliverables: Foundation

Hospital Administration Module

- Department management and configuration
- Staff registration and role assignment
- Centralised performance dashboard
- User access control and permissions

Patient Management System

- Patient registration and profiling
- Appointment scheduling system
- Medical history management
- Document upload and storage
- Discharge summary generation

Doctor Portal

- Personal schedule management
- Digital prescription creation
- Appointment tracking and notifications
- Patient record access and case history
- Treatment plan documentation

Phase 2 & 3 Deliverables: Expansion

Phase 2: Pharmacy & Laboratory

→ Pharmacy Management

Complete inventory control, purchase orders, sales tracking, and expiry alerts with supplier management.

→ Laboratory (LIMS)

Test registration, sample tracking, result generation, online access, and quality control workflows.

Phase 3: Telemedicine & Analytics

→ Telemedicine Platform

Video consultation, digital prescriptions, remote monitoring, and secure patient communication channels.

→ Analytics Dashboard

Real-time reporting, revenue insights, patient flow analytics, and customisable performance metrics.

Quality Assurance & Testing Strategy

Our comprehensive QA approach ensures that every component meets the highest standards of quality, performance, and security before production deployment.

01

Unit Testing

Individual component testing by developers to ensure code quality and functionality at the module level.

02

Integration Testing

Verifying seamless interaction between different modules and third-party integrations for end-to-end workflows.

03

User Acceptance Testing (UAT)

Real-world scenario testing with hospital staff to validate functionality against operational requirements.

04

Performance Testing

Load testing under peak hospital conditions to ensure system responsiveness and stability at scale.

05

Security Testing

Comprehensive security audits, penetration testing, and compliance validation against healthcare data standards.

06

Compliance Verification

HIPAA and NDHM (India) data privacy standards validation with documentation of compliance measures.

Regulatory Compliance & Data Security

Healthcare Compliance

The platform adheres to international and Indian healthcare data protection standards, ensuring patient privacy and regulatory compliance.

- **HIPAA Compliance:** Health Insurance Portability and Accountability Act standards
- **NDHM Integration:** National Digital Health Mission (India) guidelines
- **Data Privacy:** GDPR and Indian IT Act compliance

Security Measures

Multi-layered security architecture protecting sensitive healthcare data across all touchpoints.

- End-to-end encryption (in transit and at rest)
- Role-based access control with 2FA
- Comprehensive audit logging
- Regular security assessments
- Automated threat detection

Deployment & Infrastructure

Enterprise-grade cloud deployment ensuring reliability, scalability, and continuous availability for mission-critical hospital operations.

Cloud Deployment

Production deployment on AWS, Azure, or Google Cloud Platform with auto-scaling, load balancing, and geographic redundancy for high availability.

CI/CD Pipeline

Automated continuous integration and deployment pipeline enabling rapid feature releases, security patches, and updates with zero downtime.

Data Protection

Daily automated backups, disaster recovery procedures, and point-in-time restoration capabilities ensuring data integrity and business continuity.

24x7 Monitoring

Round-the-clock system monitoring, uptime tracking, performance analytics, and proactive issue detection with automated alerting.

Support & Maintenance Framework

Our comprehensive support framework ensures your hospital operations continue smoothly with minimal downtime and rapid issue resolution.

Service Level Agreement (SLA)

- **Critical Issues:** Response within 1 hour, resolution within 4 hours
- **High Priority:** Response within 4 hours, resolution within 24 hours
- **Medium Priority:** Response within 24 hours, resolution within 72 hours
- **Low Priority:** Response within 48 hours, resolution as per schedule

Ongoing Services

Regular platform updates, security patches, feature enhancements, and quarterly business reviews with performance analytics.

Support Channels

Email: support@designcareer.in

Phone: 24x7 Hotline

Portal: Dedicated Ticket System

Chat: In-app Support

Acceptance Criteria

Project completion will be validated against the following comprehensive acceptance criteria, ensuring all deliverables meet specified requirements and quality standards.

✓ Module Development

All eight core modules developed and functioning according to technical specifications with documented features.

✓ Quality Validation

System passes all QA checkpoints including unit, integration, UAT, performance, and security testing.

✓ Infrastructure Setup

Cloud hosting configured, CI/CD pipelines operational, and subscription billing system fully functional.

✓ Training & Documentation

Complete user manuals, technical documentation, and hands-on training delivered to client teams.

✓ Production Deployment

System successfully deployed to production environment with monitoring and support infrastructure active.

✓ Client Sign-off

Formal acceptance and sign-off received from client stakeholders after UAT completion and training.

Commercial Model: SaaS Pricing

Our flexible, subscription-based pricing model ensures affordability whilst providing scalability for hospitals of all sizes—from single-location clinics to multi-speciality hospital chains.

Subscription-Based Model

Monthly or annual billing options with predictable costs and no large upfront capital investment required.

Tiered Pricing Structure

Pricing based on number of users, hospital beds, departments, and branch locations with volume discounts.

Customisation Options

Additional custom features, integrations, and workflows available at incremental cost as per requirements.

Support & Maintenance

Annual Maintenance Contract (AMC) and 24x7 technical support included as per defined SLA commitments.

Confidentiality & Data Protection

Our Commitment

Design Career Metrics Pvt Ltd is committed to maintaining the highest standards of data protection and confidentiality for all patient, hospital, and financial information.

All data will be treated as strictly confidential and protected under applicable data protection laws including the Information Technology Act, 2000 (India) and international healthcare privacy standards.

Security Measures

- **Encryption:** Data encrypted in transit (TLS 1.3) and at rest (AES-256)
- **Access Control:** Strict role-based access with comprehensive audit logging
- **Compliance:** Regular audits and compliance certifications
- **Data Residency:** Option for India-specific data centres
- **Breach Protocol:** Defined incident response and notification procedures

Transforming Healthcare Delivery

The Hospital Management SaaS platform represents a paradigm shift in healthcare operations, combining operational efficiency with enhanced patient care delivery. By adopting this comprehensive digital solution, multi-speciality hospitals can:

- Significantly reduce operational costs through automation
- Improve service quality and patient satisfaction
- Enhance decision-making through data analytics
- Ensure regulatory compliance and data security
- Scale operations seamlessly across multiple locations
- Enable modern telemedicine capabilities

Ready to Transform Your Hospital?

Partner with Design Career Metrics Pvt Ltd to embark on your digital transformation journey. Our proven expertise, comprehensive solution, and commitment to excellence ensure successful deployment and ongoing value delivery.
